Scientific Project Manager at UK Biocentre

Scientific Project Manager at UK Biobank

UK バイオバンク サイエнтиフィック・プロジェクト・マネジャー

Kristian Spreckley is Scientific Project Manager, leading projects for UK Biobank and UK Biocentre. UK Biobank is a prospective study of 500,000 volunteers from the UK who have provided physical and lifestyle data together with biological samples. The project aims to greatly enhance medical research on the common complex diseases.

UK Biocentre is a wholly owned subsidiary of UK Biobank and effectively operates as the service arm of UK Biobank. UK Biocentre offers services and consultancy to academic and commercial organisations who are involved in scientific research projects. UK Biocentre can provide a range of advice and services from how to setup and run your research project right through to running a complete project from participant recruitment through to eventual sample analysis.

Kristian Spreckley started his career in medical research working on breast and prostate cancer before moving onto the genetics of osteo and rheumatoid arthritis where he gained his PhD. From there he moved into the commercial sector selling molecular biology instrumentation and then large scale automation to the international biobanking industry before joining UK Biobank/ UK Biocentre.
